# morse training with the Junior Computer 

Here is yet another small program to be added to the large amount of soft－ ware already available for the Junior Computer．It is intended to teach pro－ spective short wave listeners to read morse code．The program can be used even with the basic version of the JC． The only additional hardware is the amplifier stage shown in the accom－ panying figure．The input to this is taken from port line PB5．
The number and speed of the morse characters can be predetermined． After the program has started，the JC will generate 1 to 6 morse characters， which the trainee should decode and write down．The letters corresponding to the generated characters appear on the display after a short delay，so that the trainee can check his decoding with the actual text．During this phase，the computer is on stand by until an arbitrary key，other than ST and RST，is pressed．
The hex dump given is sufficient to write the program into the JC．Once that has been done，you can prepare the start，but the program needs the following information before it can run．
in address 0010 write data Ø0．．． 05 ；
－in address 0011 write data $01 \ldots 55$ （max）；
－in address 0014 write data from table 1 for the first character to be generated minus 1 ；
－in address 0015 write data from table 1 for the last character to be generated．
Now，the program can be run；it starts in address $\emptyset 02 \emptyset$ when key GO is pressed．Programming example：the JC is to generate morse characters for the letters B to G．Before the start，the folowing data should be written：
－in address 0010 －data 05
－in address 0011 －data 55
E in address $\emptyset 014$－data 02
■ in address $\emptyset 015$－data 07

Table 1.

| alphanumeric character | hexadecimal code | alphanumeric character | $\left\lvert\, \begin{gathered} \text { hexadecimal } \\ \text { code } \end{gathered}\right.$ |
| :---: | :---: | :---: | :---: |
| A | 01 | S | 13 |
| B | 02 | T | 14 |
| c | 03 | u | 15 |
| D | 04 | v | 16 |
| E | 05 | w | 17 |
| F | 06 | $\times$ | 18 |
| G | 07 | Y | 19 |
| H | 98 | z | 1 A |
| ， | ๑9 | 1 | 18 |
| J | OA | 2 | 1 C |
| k | 0B | 3 | 1 D |
| L | OC | 4 | 1 E |
| M | 00 | 5 | 1 F |
| N | OE | 6 | 20 |
| － | OF | 7 | 21 |
| P | 10 | 8 | 22 |
| － | 11 | 9 | 23 |
| R | 12 | 0 | 24 |

Table 2.

| address | function |
| :--- | :--- |
| 026 F | alphanumeric display routine |
| 028 D | tone generation routine |
| 02 AB | random number routine |
| 02 CB | display code table |
| 02 F | morse code table |
| 0000 to | display buffer |
| 0005 | number of letters <br> 0010 <br> length of dots and dashes <br> （speed） <br> lower limit of block of <br> characters to be generated <br> upper limit of block of <br> characters to be generated |
| 0014 |  |

|  | $\emptyset$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | A | B | C | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 8310： |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

As soon as these data have been writ－ ten，the program starts when key GO is pressed．
The hex data for the letters of the alphabet and numbers $0 \ldots 9$ are given in table 1．The most important addresses are given in table 2 ．
